Construction Insurance Partners' Proprietary Administration System

An integral part of our service to the Sponsor involves Construction Insurance Partners' (CIP) **Project Risk & Information System Manager – PRISM**. **PRISM** has been specifically designed to compile, store, manage, and process the data for the Controlled Insurance Programs. This system provides the tracking and management reporting capabilities to enable Sponsor(s) to efficiently control and monitor the overall cost of risk. The **PRISM** System was developed to scale the business, management, and workflow processes over a larger number of projects. It is a browser-based Web application, built upon the new Microsoft .Net technology with a Microsoft SQL Server 2000 database. CIP hosts this robust application internally and provides access to external entities through the Internet, with the proper authorization.

Some Key features are:

Location/Project

Lists general information, expected costs, and Controlled Insurance Program policy information;

Multi-Level tracking of project hard costs, estimated labor percentages, project policy numbers and carriers, estimated project length; and

List of enrollments by contractor including bid information, award date and type of work performed.

Contractor

Generates certificates of insurance for each contractor;

Tracks insurance credits, off-site insurance limits and requirements, experience modifiers, payrolls, workers' compensation codes and rates;

Tracks the dates that the Controlled Insurance Program forms were sent to and received from contractors;

Start date/estimated end dates;

List of subcontractors; and

On-line enrollment and payroll reporting capability.

Policies

Automatic policy number issuance.

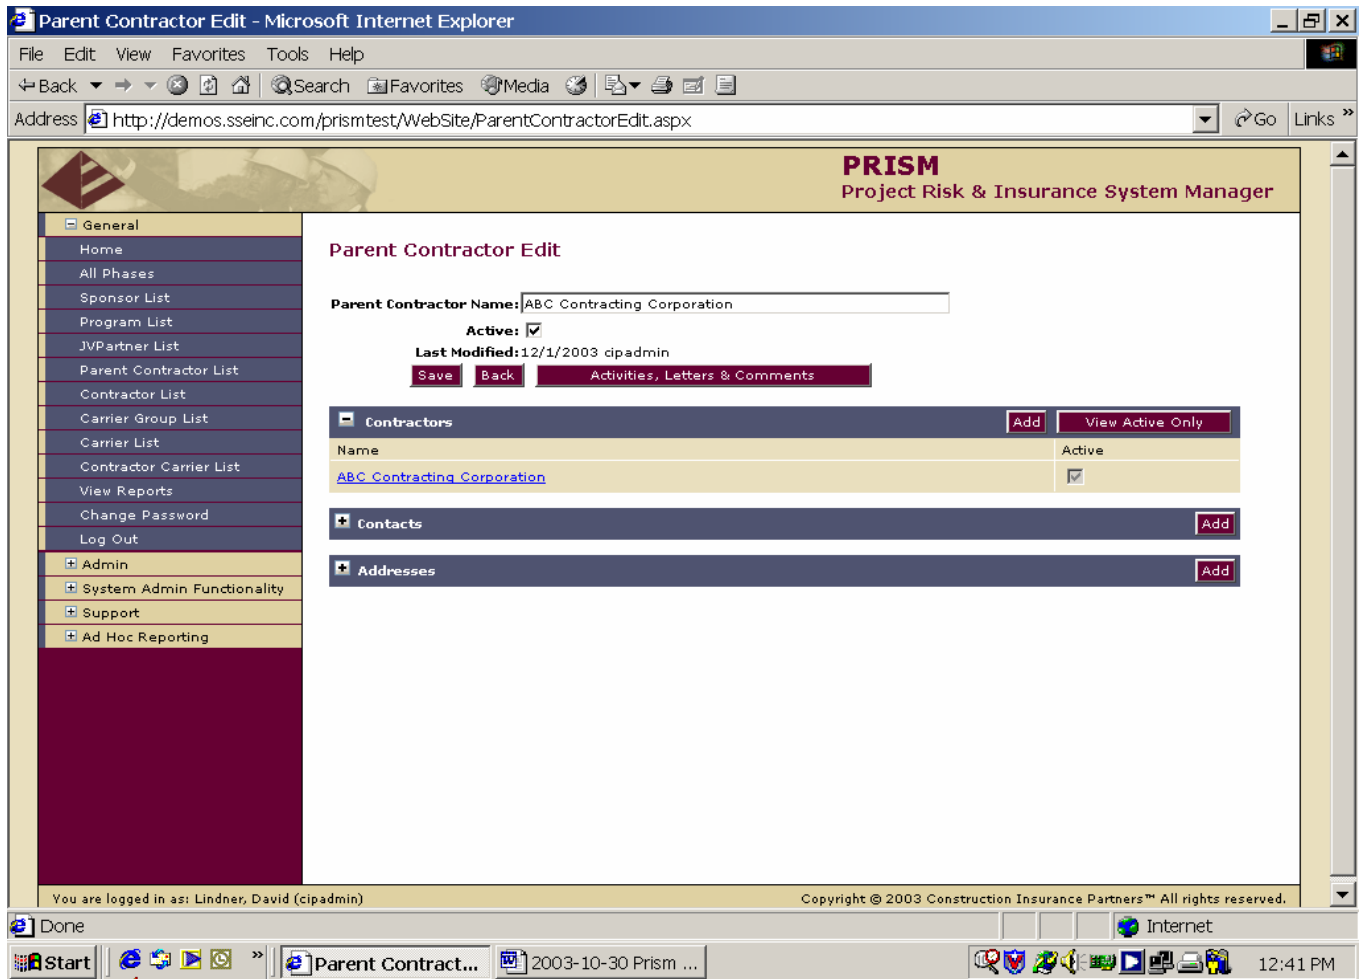

Carrier

Contact information and all policies under each carrier.

Reports

The **PRISM** system includes a comprehensive standard report library. Detailed queries and customized reporting are easily accomplished through the system's flexible reporting function.
